

Alternative IPaC Strategies for COVID-19

Follow [CDC guidance](#) for **AllIR isolation room** and **Standard, Contact, and Airborne Precautions plus eye protection**, if necessary supplies are available.

Alternative Infection Prevention and Control Strategies

If N-95 or higher level respirators are not available, follow **Standard, Contact, and Droplet Precautions plus eye protection**.

Healthcare facilities in Kansas cannot and *should not* be turning away patients or refusing care for fear of COVID-19.

If AllIR rooms are not available:

- Facemask on patient at all times (exception for necessary procedures)
- Private room with door shut
- Minimize and dedicate staff
- Limit time with patient to less than 10 mins as much as possible
- Stay outside of close contact range (within 6ft of patient) as much as possible
