Travel-Related Quarantine Guidelines | COVID-19

Updated March 26, 2021

In response to the COVID-19 pandemic, The Kansas Department of Health and Environment (KDHE) will issue regular mandates on travel-related quarantines for international, domestic, and cruise-related travel. The length of a travel-related quarantine is 7, 10 or 14 days after your last exposure depending on whether you have been tested for COVID-19 and preference of local health officer. Quarantine would start the day after you return to Kansas. See shortened quarantine guidance below. If you do not develop symptoms of COVID-19 during your quarantine period, then you are released from quarantine. Regularly check this list to stay up-to-date on travel-related guidance. Please refer to the KDHE Isolation and Quarantine FAQ for additional information.

KDHE is mandating a home quarantine for anyone in Kansas if you have:

1. Travel on or after March 26 to Delaware, Michigan or Rhode Island.
2. Travel on or after March 26 to Hungary or Jordan.
3. Travel on or after March 12, 2021 to New Jersey or New York.
4. Travel on or after March 12, 2021 to Estonia or the State of Palestine.
5. Travel on or after February 26, 2021 to Czechia, San Marino or Montenegro.
6. Attendance at any out-of-state mass gatherings of 500 or more where you did not socially distance (6 feet) and wear a mask. Mass gatherings are defined as any event or convening that brings together 500 or more persons in a single room or space at the same time such as an auditorium, stadium, arena, large conference room, meeting hall, theater or any other confined indoor or outdoor space. This includes parades, fairs and festivals. Mass gatherings does not include normal operations of airports, bus and train stations, medical facilities, libraries, shopping malls and centers, or other spaces where 500 or more persons may be in transit. It also does not include typical office environments, schools, restaurants, factories or retail/grocery stores where large numbers of people are present, but it is unusual for them to be within 6 feet of one another for more than 10 minutes.
7. Traveled on a cruise ship or river cruise on or after March 15, 2020.
I have traveled recently and meet one of the mandatory quarantine criteria above. What should I do?

Those who are under a 7, 10 or 14-day home quarantine should stay home and monitor their symptoms. They should not attend school, work or any other setting where they are not able to maintain about a 6-foot distance from other people. If you become ill and need to seek medical attention, let your provider know that you have traveled recently or have been otherwise exposed to COVID-19. See KDHE’s Isolation and Quarantine FAQ for more information.

If I am fully vaccinated, do I need to quarantine due to travel?

Vaccinated persons are not required to quarantine regarding travel if they meet all of the following criteria:

• Are fully vaccinated (i.e., ≥2 weeks following receipt of the second dose in a 2-dose series, or ≥2 weeks following receipt of one dose of a single-dose vaccine)
• Are within 6 months following receipt of the last dose in the series
• Have remained asymptomatic since the travel

Persons who do not meet all 3 of the above criteria should continue to follow current quarantine guidance for travel.

How are these travel areas determined?

For countries outside of the United States, KDHE evaluates rates of diseases in those countries compared to the Kansas rate.

For locations within the United States, KDHE uses a number of sources of data including the number of cases each state has per population to determine whether the rate of disease is higher than the Kansas rate.

Currently, KDHE does not consider travel within Kansas as a criteria for travel-related quarantine. However, a local health officer may choose to include this as a criteria so you should be aware of your local isolation and quarantine criteria.

Check this page routinely for more the most up-to-date information regarding travel-related guidelines.

Shortened Quarantine Guidance
KDHE continues to recommend a 14-day quarantine following exposure to COVID-19, as the incubation period for this disease is 14 days. CDC has released modified guidance allowing for shorter quarantine periods to increase better compliance with quarantine and increase people getting tested. Local Health Departments may choose to opt into this guidance. For information in your county, please contact your local health department.

How the Shortened Time Period Works
(Please check in with your local health department for specific information in your community)
7 Day Quarantine (Includes Testing and No Symptoms)
- After exposure, you monitor yourself for symptoms daily or participate in monitoring by Public Health for 7 full days.
- If you have no symptoms during this time frame, on or after Day 5, you may get a PCR test (antigen and antibody tests are NOT allowed for this purpose).
- If the test is negative, and you remain symptom-free, you can be removed from quarantine on or after Day 8.
- If Testing Results are pending, you must wait until you receive results.

10 Day Quarantine (No Testing and No Symptoms)
- After exposure, you monitor yourself for symptoms daily or participate in Public Health monitoring for 10 full days.
- If you have no symptoms during the 10 days, you can be released from the quarantine without a test on Day 11.
KDHE recommends all exposed people should self-monitor for fourteen (14) days from exposure and contact healthcare provider if symptoms develop. Disease can still develop through day 14.

Who is Not Eligible for Shortened Quarantine:
- Residents of long-term care and assisted living facilities
- Offender populations in Department of Corrections prisons

When is it preferable NOT to allow Shortened Quarantine:
KDHE recommends that close contacts of cases infected with variants of the SARS-CoV-2 virus that are known to be more infectious observe the full 14-day quarantine.
Quarantine Length

Quarantine length is 7, 10 or 14 days after your last exposure depending on whether you have been tested for COVID-19 and preference of local health officer. Quarantine would start the day after you return to Kansas from travel or the day after your last exposure.
